

QUALITY FEATURES for Knocked-down and All-welded

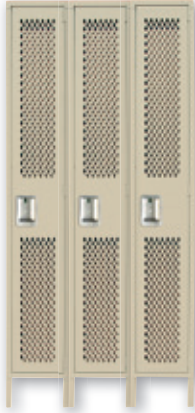

Lyon Solutions to Locker Abuse

- Lockbars feature latching fingers that engage 12-gauge door jambs for maximum security
- High security single point latches are designed for built-in locks with wrap around technology. Includes padlock hasp
- The door frames are formed by overlapping and welding the junction between the horizontal and vertical

members to form a rigid unitized structure that fully frames the door

- Standard hinges are full loop design and provide more strength than larger butt type hinges
- Full loop hinges are inserted through slots in the door and frame to maintain alignment and increase strength
- Door frames include integral full height 16-gauge door strikes to reinforce door edges

- One piece doors formed from 14-gauge prime, high grade class 1 steel
- Three latch points on single tier doors and two on double and triple tier doors
- One piece recessed handle pockets add strength to the handle area and eliminate the vulnerable seams of formed handles
- Soft rubber bumpers, at door jamb locations, cushion door slams

Ventilation:
Sides and doors
are punched with
diamond shaped
perforations.

Single Tier Ventiladed Lockers

are widely used to provide ample storage for full length garments with shelf space for books, lunches, electronics and other articles.

Actual height of 37" high = 37-1/32";
48" high = 48-5/8"

Double Tier Ventiladed Lockers

are designed for short period use, or where short coats and jackets are worn.

For overall height, multiply number of openings by height listed.

Add 6" to height for legs when desired.

Triple Tier Ventiladed Lockers

save valuable floor space and are often used in combination with single tier and double tier lockers to make P.E. class lockers.

Multiple Tier Ventiladed Lockers

allow a wide variety of space saving applications. Often used with Lyon single tier and double tier lockers to make P.E. lockers.
